

**SYSTEM AND METHOD FOR PROVIDING DIAGNOSIS AND
MONITORING OF CONGESTIVE HEART FAILURE FOR USE IN
AUTOMATED PATIENT CARE**

Abstract

5 A system and method for providing diagnosis and monitoring of
congestive heart failure for use in automated patient care is described. At least
one recorded physiological measure is compared to at least one other recorded
physiological measure on a substantially regular basis to quantify a change in
patient pathophysiological status for equivalent patient information. An absence,
10 an onset, a progression, a regression, and a status quo of congestive heart failure
is evaluated dependent upon the change in patient pathophysiological status.
